

On the Subject of Color Decoding

The colors, Simon; what do they mean!?

This module is comprised of three stages, where each stage contains a 4×4 indicator grid above a 6×6 display grid. Each grid is comprised of five colors: Red, Green, Blue, Yellow, and Purple. In each stage you must select a number of rows and/or columns from the 6×6 grid. You can select a row or column by pressing the arrow button at the end of that row or column. The selections you must make can be determined as follows:

- From the pattern of the indicator and the state of the bomb, determine the row in the next table to use for the stage.
- For the Venn line patterns section, consider the colors present in the indicator. For every color that is present in both the indicator and the table row for the stage, obtain the line pattern above that color in the column. Use that pattern or patterns in the Venn diagram on the following page to determine the correct constraint set number.
- Go to that constraint set. For each constraint in that set from top to bottom, select the row or column which satisfies that constraint from the 6×6 grid. Skip the constraint labels described in the skip section, based on the number of number of colors in the indicator. If there is only one color in the indicator, do not skip any labels.

Indicator Pattern	Bomb/Module State	Venn Line Patterns				Skip Section

Note: Sequence constraints are reversible; e.g. BRR and RRB are equivalent on the display.
